# SOA Puzzle 67

Through the Thicket

The aim of this puzzle is to find a route from the start to the finish staying in the runnable forest and avoiding the thickets. The thickets will each contain only 1 of the printed numbers. The number indicates the number of squares which makes up the thicket. The thickets cannot be connected together (but can touch at corners) and no area of runnable forest is in a 2x2 block. The runnable forest is all connected.
