

# SOA Puzzle 80

## Route Link

An orienteer has completed a course where the start and finish are at the same point, so their route is a single continuous loop. The loop never crosses itself. Help the orienteer draw the route that they have taken on their course. To make it easier to draw their route they have split the map into grid cells and will draw the course using straight lines along the edges of the cells. If there is a number in a cell it indicates how many lines surround that square. If there are no numbers then there can be any number of lines as long as the route never crosses itself.
